

Pozo Chiquillo (PS1)

Depth: 5 m

This is a 5m pit with a non-descript entrance in rocky soil. Several rocks were pulled out to enlarge the entrance to about 0.5 m diameter. The shaft goes straight down for slightly over 5 m, with a slight constriction at 1.5 m. There is a small drain in the rocky bottom. The walls of the shaft are coated with flowstone and popcorn, with occasional small stal. The cave was mapped on 25 November 2009 by Geoff Hoese.
