

Pozo del Escorpión (SR14)

Depth: 17 m

This pit is in a bedrock area. It is an angled shaft with ledge 2/3 of the way down. A smaller infeeder drops into the bottom, free-climbable up 8 meters or so. A scorpion, dark in color, was on the wall of the infeeder. This pit was located in October 2009 by Geoff Hoese and Peter Sprouse. Vivian Loftin and Taco van leperin mapped it on 23 November 2009.

Pozo del Escorpion (17m)

Muzquiz, Coahuila, Mexico
